

INTRODUCING THE AIRLESS
MINI-BALL
USING PU-FOAM

BOUNCE TO
BRILLIANCE

Get Customized Mini Balls

We provide opportunity to businesses to get customized mini balls from us.

You can get them made in a variety of colours tailored to your brand's identity.

You can also get your company's logo printed on the product. These personalized balls are a great option for corporate events, promotional giveaways, and corporate gifts.

The branding and co-branding opportunity helps increase your brand visibility, brand awareness, and recognition. The colourful mini basketballs attract attention and increase brand engagement, strengthening your corporate identity.

***BIG DREAMS

PERFECT FOR AGES 3+

Our mini balls are designed for kids aged 3 and up. They are crafted from premium PU foam for softness, bounce, and durability. These PU foam based balls are specially crafted keeping the safety of kids in mind. They significantly reduce the risk of injuries providing a safe and fun playtime for kids. Our mini balls also help develop motor skills and coordination in kids making them an ideal choice for children's active play.

GET TO KNOW OUR PROCESS

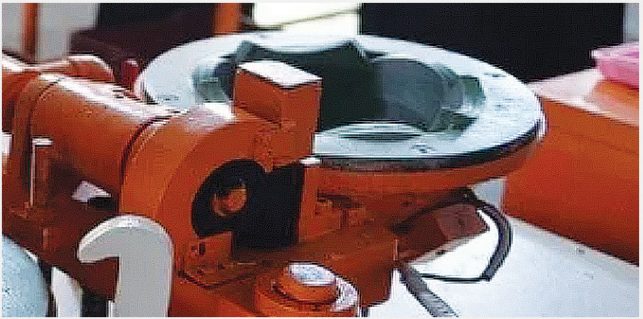

Using Premium Quality Materials

We use premium materials for the production of our mini balls. The raw materials are poured in molds in the shape of a ball with a diameter of 134 mm approximately. Our manufacturing process is continuously evaluated to ensure efficiency and effectiveness. There is strict adherence to safety protocols for a safe working environment.

Ensuring Proper Shape

After setting, the balls are removed from the mold and kept at room temperature for a day to ensure they hold their shape properly and there is dimensional stability. They are then transferred to the printing section for the design and logo details using pad printing technology.

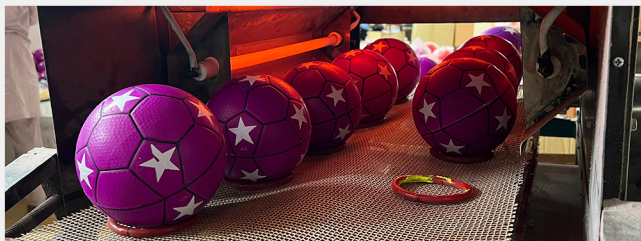

Application of Eco-Friendly Ink

Water based coating and oil-based ink is used for the coating and printing on the mini balls. Both these materials are environment-friendly leading to reduced carbon footprint.

Final Touches & Ready for Play

Before the mini balls are packed and dispatched for distribution, they go through rigorous quality testing at various levels. From foam density to coating thickness and ink adhesion, everything is monitored. The bounce, colour and product appearance is also meticulously checked.

Eco-friendly Manufacturing

Producing environmentally-responsible products aligns with the values and vision of our business. To reduce our company's carbon footprint and minimize the environmental impact, we use water-based coating on our mini balls. We also use eco-friendly oil based ink for printing logos and design. These sustainability practices help us mitigate climate change, ensuring a healthier planet for the future generations.
